Databricks stock price is built algorithmically using secondary market and reference data.

About Databricks, Inc.

Databricks is a [ML](#), [AI](#), and data intelligence company known for creating Delta Lake, MLflow, and Koalas. Databricks' open source projects have been designed to support [data storage](#) and data engineering. The company makes data-driven insights and decision-making assistance available for data scientists in varied industries.

The Databricks data lakehouse platform in the cloud helps customers collect and simplify data. Databricks counts Apple, Disney, H&M, HSBC, Shell, Conde Nast, and Atlassian among its customers. The company has attracted over 10,000 other clients and has a retention rate of 150%.

Databricks recently released Vector Search which assigns meaning and context to unstructured data (both text and images).

Databricks is investing in AI and ML, and acquired MosaicML for \$1.3 billion. The company also acquired Tabular, Redash, 8080 Labs, Okera, and DataJoy.

The company is headquartered in San Francisco, California with many other locations around the world including: Canada, the UK, the Netherlands, Australia, France, China, South Korea, Singapore, Germany, Serbia, Switzerland, Brazil and India.

Appendix

Footnotes

1. Last round valuation used because market capitalization cannot be calculated

We always endeavor to publish real-time market capitalizations for all companies that have real-time Notice Prices. If any requisite data is unavailable, then we fall back on the last round valuation until we are able to locate the missing data needed to publish real-time market capitalizations.

2. Announced date used because close date is unknown

Company funding round announcement can occur well after the round actually closed. We use reasonable methods to identify the funding round close date. If we are unable to find the close date, then we will fall back on last round announced date as the next best alternative date for the funding round.

3. Annualized

Notice Price performance is annualized for time periods of one year or greater. Multi-year price performance is shown as a compound annual growth rate.

4. Annually recurring revenue (ARR)

This revenue estimate represents annually recurring revenue (ARR).

5. Calculated using current year projected revenues assuming linear revenue growth

Private company trailing twelve months (TTM) often rely on current year projected estimates and TTM calculations assume linear revenue growth across the annual timeframe.

6. Calculated using last round valuation because market cap cannot be calculated

We always endeavor to publish real-time market capitalizations for all companies that have real-time Notice Prices. If any requisite data is unavailable, then we fall back on the last round valuation until we are able to locate the missing data needed to publish real-time market capitalizations. This value is calculated using last round valuation.

7. Calendarized fiscal year revenues

Public company revenues have been calendarized to simplify comparisons between companies with different fiscal year ends.

8. Calculated assuming the sale of all authorized shares

We are unable to source the amount raised from company announcements. This value is calculated by assuming that all authorized shares for this share class were sold to investors.

9. Calculated using amount raised and authorized shares

We are unable to source the funding round price per share from company filings. This value is calculated assuming all authorized shares for this share class were sold to investors.

10. Sourced from the Notice community

We were unable to source this data from company filings and we are falling back on information sourced from Notice community members.

11. Sourced from news

We were unable to source this data from company filings and we are falling back on information sourced from the news media.

12. Estimated value

The best available source does not contain an exact value. We are falling back on the estimated value cited in the source.

13. Corrected date

The company filed late. We are falling back to a prior date referenced in the filing that more closely reflects the correct date.

14. Split adjusted

This value has been adjusted for forward or reverse stock splits.

15. Calculated because conversion price is not stated in filings

This value is calculated because the conversion price is not explicitly stated in corporate filings. Calculations account for conversion ratios, dividends and anti-dilution provisions.

16. Calculated using narrow-based anti-dilution because broad-based anti-dilution cannot be calculated at this time

This value is calculated because the conversion price is not explicitly stated in corporate filings. Calculations account for conversion ratios, dividends and anti-dilution provisions. Narrow-based anti-dilution is used because broad-based anti-dilution cannot be calculated at this time.

17. Corrected value

This value is calculated using corrections to public fund filing(s).

18. Notice Price used because last round price or waterfall exit values are unknown

Notice Price has been used to mark this position because the last round price is unknown and/or waterfall exit values cannot be calculated at this time.
